## Projects

### Netflix-GPT

Dec 2023 – Jan 2024

React.js | Javascript | tailwind | Firebase | RTK

- Engineered a seamless UI and implemented robust routing functionalities for dynamic display of diverse movie categories.
- Integrated Firebase authentication system to enable seamless Sign-in/Sign-up experiences, enhancing user engagement and security measures.
- Engineered a dynamic system for displaying random trailer videos on every re-render.
- Developed comprehensive sections for movie details, cast information, related movies, and provided similar movie suggestions, optimizing user navigation and content discovery.
- Implemented genre-based movie listing using advanced algorithms and leveraged Open AI GPT for personalized movie recommendations, enhancing user satisfaction and retention rates.
- **Deployed project link:** [Netflix-GPT](#)

### FoodX

Feb 2024 - Present

React.js | Javascript | styled-components | Firebase | RTK

- Developed and maintained a food delivery website similar to Swiggy using React and Firebase..
- Implemented user authentication features for seamless sign-in/sign-up.
- Created dynamic menus for restaurants with detailed descriptions, images, and pricing.
- Integrated Razorpay for multiple payment methods
